

6 Reasons to Switch to

SIP TRUNKING

With Sierra Experts

Session Initiation Protocol (SIP) facilitates Voice over IP (VoIP) communication sessions for telephone services and other real-time communication services, such as instant messaging and conferencing. SIP Trunking establishes a communication connection over the Internet between a customer location and an Internet telephony service provider (ITSP). In other words, with SIP Trunking, you can replace your telephone lines with your internet connection.

1 Cost Effective

- Save an average of 10-40% when you switch
- No need for separate voice and data connections
- Turn all phone calls into local calls, eliminating long-distance charges

2 Simple

SIP Trunking creates a single network connection, allowing you to manage all communication with a single service provider.

3 Scalable

Quickly increase your call capacity by any increment over the internet, without the need to purchase additional hardware.

4 More Efficient

SIP Trunking creates a single network connection, allowing you to manage all communication with a single service provider.

5 Local Numbers

With SIP Trunking, you can eliminate the need for costly 1-800 numbers, and instead, establish presence in multiple cities by using local area codes.

6 Expert Support

The Sierra support team is available 24x7x365.

We do IT differently.
